ACQUIRED

SUPPLEMENT TO 25X1X
REPORT NO.

DATE OF [REDACTED]

RETURN TO CIA

Between Rokycany (N50/L24) and Pilsen a number of test drills have been made to determine the uranium content of the soil. A rich layer of uranium ore has been discovered in the vicinity of Horni Litvinov (N51/F13).

Scopolamine or its derivatives are being used in the production of injections used during interrogation. Such injections are not often used because of the unsatisfactory results. Some persons are not susceptible to influence from Scopolamine. Often the prisoner is made to believe that he has been inoculated in order to gain the psychological advantage that such a belief will have. It has been found that will power will overcome the effects of inoculation.
